A new device for delivering orders to

trainmen on the Pennsylvania railroad system became operative at once today. To obviate the need for stopping trains to receive orders the trainmen will receive their orders while going at top speed. The orders will be placed on hoops placed outside the telegraph towers and as the train shoots by the engineer or conductor will run his arm through the hoop containing the orders and take it along. The hoops will be turned into the roundhouse at the end of the run. The above mentioned device was used by railroad agent at Mt. Vernon nearly twenty years ago to deliver messages to trainmen without stopping trains. James Maret was the agent. BIG ENTERPRISE. A deal which is now on, if consummated will mean a big enterprise for Mt. Vernon. On last Friday, W.J. Sparks and S.W. Davis took thirty a day option on the farm of R.B. Mullins, better known as the old Adams farm. It is the purpose of Messrs. Sparks and Davis to put in a rock crusher and lime kiln near the cut, a short distance this side of No. 1 tunnel. While it is known that the rock suitable for ballast purpose is there in abundance, yet the question to decide is whether or not the rock is suitable for lime, which will be thoroughly tested and if found to be, the work will be started at once which will mean much for Mt. Vernon. Later information says that the deal will be a go and the rock crusher installed whether or not the rock is suitable for lime or not but we did not get this direct, do not give it as altogether reliable.
