Thinking About Cleaning Your Carpet! Some things to think about...

What is the best way to clean my carpet, should I use the old technology of steam cleaning or the new technology of dry foam?

Test results from Consumer Report, 2008.

Option 1: Steam Cleaning-How does it work?
A. Steam Cleaners saturate your carpet and floor pad with hot (150° degree) soapy water containing lye and beach to help dissolve stains.
B. After your carpet reaches its maximum saturation point the solution is then extracted by means of a commercial shop vacuum.
The results: Removes less than 20% of the soil from the carpet driving the remainder down deeper into the carpet fibers. The lye/bleach solution used by steam cleaners to dissolve stains fades carpet colors. Drying time is 1 to 5 days depending on the carpet texture. As a result of the water saturation, carpet fibers harden and the floor pad remains damp, which promotes bacteria growth and mildewing, causing carpet threads to rot, shorting the life of your carpet. Carpet manufacturers recommend that you do not steam clean carpets.

Option 2: Dry Foam-How does it work?
C. Carpet fibers are agitated with carpet combs to separate the fibers loosening dirt particles, which are then dry cleaned with an industrial strength vacuum.
D. The carpet is then shampooed with horse hair brushes using Dry-Foam lather, a solution that contains six different cleaners and fabric softener, color brightener, deodorizer, disinfectant, crystalline agent, scotch guard, & degreaser. Does not contain lye or bleach.
E. Carpet fibers are then groomed to fluff up worn walk areas to give a uniform look to the carpet.
The results: Removes over 90% of carpet soil. Rejuvenates and brightens colors and patterns of carpets. Drying times is less than 2 hours. Floor pads remain dry-Fabric Softener makes carpets soft again-Promoting the life of the carpet.
Carpet manufacturers recommend Dry Foam to clean Carpets.
